DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claim 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Skemer et al. (US Patent 6,570,849).

Regarding to claim 1 and 7, Skemer teaches a method for transmitting delay sensitive information (DSI) and non-delay sensitive information (NDSI) over a communication link of a communication network, the method comprising the steps of: transmitting fragmented NDSI (NRD in Column 6 Line 3) in accordance with a network protocol where the fragmenting is based on parameters of received DSI (RTD in Column 6 Line 3) and is performed in accordance with a network layer protocol (Column 12 Line 35-42).

Regarding to claim 2, Skemer teaches the step of transmitting NDSI comprising calculating a fragmentation requirement for each received initial DSI; reviewing the fragmentation requirements of the received DSI after a new DSI requirement was calculated or after transmission of a DSI was terminated to determine a fragmentation requirement that is most restrictive; and altering the

fragmenting of NDSI to comply with the most restrictive fragmentation requirement (Column 8 Line 60-62 and Column 10 Line 31-34).

Regarding to claim 3, Skemer teaches a step of transmitting DSI in accordance with required timing relationships and transmitting NDSI in a non-fragmented manner when there are no DSI to be transmitted (Column 8 Line 60-62).

Regarding to claim 4, Skemer teaches the network protocol as an OSI-based layer 3 protocol (Column 8 Line 33-34).

Regarding to claim 5, Skemer teaches the fragmenting further based on information rate of the communication link (Column 9 Line 4-20 and Line 48-55).

Regarding to claim 6, Skemer teaches the parameters of the received DSI comprise variables including information compression (Column 10 Line 18-22), sample rate of DSI (Column 9 Line 39-42), number of communication channels included in the DSI (Column 10 Line 4-8), amount of overhead information included in the DSI (Column 9 Line 60 – Column 10 Line 3) and amount of subscriber information in the DSI (Column 9 Line 56-59).

Regarding to claim 8, Skemer teaches an integrated access device (IAD) 10 coupled to subscriber equipment and to an access network.

Regarding to claim 9, Skemer teaches host equipment 3 where such host equipment is coupled to a packet based communication network and to an access network.

Response to Arguments

3. Applicant's arguments with respect to claim 1-9 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to further show the state of the art with respect to the invention in general.

U.S. Patent 6,650,652 to Valencia

U.S. Patent 6,956,867 to Suga

U.S. Patent 5,497,371 to Ellis et al.
